Tooth Whitening

Bleaching

Tooth whitening or dental bleaching is one of the fastest and easiest ways to improve your appearance and put more sparkle in your smile. With tooth bleaching, the colour of the enamel is lightened, and the teeth look younger, healthier and brighter.

The procedure can be done in one of two different ways.

1. The in-office procedure uses a laser bleaching light, and can be completed in the dental office
2. The second method, called at-home bleaching, involves the fabrication of custom bleaching trays, and takes longer, but works just as well.
